

BLANC FINE™ CC calcium carbonate series products**CC - H**

BLANC FINE™ CC is type of ultra-fine calcium carbonate grains of D_{97} less than 1.0um made from refined and highly pure limestone by up-to-date power grinding technology and after-treatments. The addition of different after-treatment agents in varied **BLANC FINE™ CC** models result in different final products of different gloss.

As composed of fine and pure white calcium carbonate, most **BLANC FINE™ CC** products are used in the product formulas having no requirements for weathering resistance.

项 目	BLANC FINE™ CC - H
Dry brightness (ISO.7724)	95
Specific surface area, cm ² /g	25000±500
Mean grain size D_{97} (SC. method)	<10um
Oil absorption (DIN.EN.ISO.787, Pt.10)	35
Volatility at 105°C(DIN.EN.ISO.787, Pt.2)	<0.3
